

### ***Summer Technology's Disaster Recovery Plan (DR) – We've got you covered***

Large corporate organisations go to great length to ensure systems uptime, normally using off-site facilities to replicate their servers; such plans cost in excess of \$50,000/year and offer only one (1) recovery test! Software costs for such plans are optional extra!

Summer Technology offers a more sensible disaster recovery plan using a mixture of software recovery and good planning.

With its strategic partnership with Acronis, the Leading software disaster recovery provider, Summer Technology can implement a full DR solution to your business. Our DR team will implement "Acronis" disaster recovery system, with its "Universal Restore option", on all your critical servers.

For a complete peace of mind, Summer Technology proposes to perform a quarterly "recovery test" to ensure that the DR plan is sound and functional; each test will take up to 10 hours to perform off-site.

As an optional extra, Summer Technology can also provide your company with a temporary replacement server within a matter of hours, through Summer Technology's server-ready subscription. In the event of a disaster we can restore your data in a minimal timeframe with least possible disruption to the business. The backup server will be brought to your existing site or to a temporary site in the event that your offices are rendered unusable..

### **Summary of Server Options available**

	<b>Cost</b>
<b>Acronis True Image Enterprise Server Echo + Universal Restore Software Only</b>	<b>POA</b>
<b>Acronis True Image Enterprise Server Echo + Universal Restore Software + Implementation, Procedures + Documentation</b>	<b>POA</b>
